

Delivering 360° Benefits

Flow360 is a web-based tool that enables a reduction in maintenance and energy costs through an innovative, collaborative, approach to the management and maintenance of assets and facilities.

Organisation-wide Benefits

- collaborative environment and shared data promotes more efficient and effective working practices
- flexible working remits and internally stored rates simplify and speed up the process of sending and receiving works enquiries and orders
- the entire maintenance process is logged and updated online - everyone has immediate access to up-to-date information

- tangible cost and efficiency benefits for all key players
- use of Flow360 actively promotes a move from reactive to planned maintenance
- in total, it is possible to realise savings of up to 21%, and governing bodies, managers and service providers all share in these savings
- time saved and human resources are released
- finance saved can be re-targetted
- improved quality of service - all users know when, what and how much the maintenance will be
- predictability - service can be optimised to be least disruptive
- in total, it is possible to realise savings of up to 20%, and governing bodies, managers and service providers all share in these savings
- time saved and human resources are released
- finance saved can be re-targetted
- improved quality of service - all users know when, what and how much the maintenance will be

- predictability - service can be optimised to be least disruptive and most efficient
- secure multi level access means all users can log on using their own account and access their data whenever they like
- never enter the same information twice - the integrated nature of Flow360 ensures that data is only ever entered once and is then available throughout the solution as required
- remote data storage, mirroring and backup ensures data security and availability
- web based nature of solution means no software installations or data storage on local computers and no software updates to worry about
- single point of access to all relevant information for every user
- central document storage ensures all users can access and share important documentation no matter where they are
